

## Numeracy Warm Up - Number

<b>Estimating</b>				
<b>Target 1</b>	<b>Target 2</b>	<b>Target 3</b>	<b>Target 4</b>	<b>Target 5</b>
<p><i>Engage with the vocabulary of estimating</i></p> <p><i>Distinguish between exact and approximate numbers</i></p>	<p><i>Estimate the approximate value of a number on a number line with no divisions other than interval limits</i></p> <p><i>Estimate the relative size of shapes</i></p>	<p><i>Estimate which element of a set of objects is more numerous</i></p>	<p><i>Estimate the number of objects displayed</i></p>	<p><i>Select which is the best approximation to use for a calculation</i></p> <p><i>Use rounding to make an estimate of a calculation</i></p>
<p>1. Engage with the language of estimating, e.g. around, about, nearly, almost, just over, just under, roughly, about the same as, etc.</p>	<p>1. Estimate the value of a number on a number line</p>	<p>1. Estimate which of two colours of sock is more numerous</p>	<p>1. Estimate the number of objects displayed from 12 to 25</p>	<p>1. Select which approximation is the best, when adding 2 digit numbers less than 50, e.g. <math>12 + 19</math>: <math>10 + 10</math> or <math>10 + 20</math></p>
<p>2. Engage with the language of estimating by completing statements about approximate values.</p>	<p>2. Identify a shape that is approximately the same size as a given shape</p>	<p>2. Estimate which of two items of cutlery is more numerous</p>	<p>2. Estimate the number of objects displayed from 25 to 60</p>	<p>2. Round each number to the nearest 10, to estimate a single stage addition using numbers up to 50</p>
<p>3. Identify statements which use estimated numbers from statements which use exact numbers</p>		<p>3. Estimate which of three colours of sock is more numerous</p>	<p>3. Estimate the number of objects displayed from 60 to 120</p>	<p>3. Select which approximation is the best, when subtracting 2 digit numbers less than 100</p>
		<p>4. Estimate which of three items of cutlery is more numerous</p>	<p>4. Estimate the number of objects displayed from 120 to 200</p>	<p>4. Round each number to the nearest 10, to estimate a single stage subtraction using numbers up to 100</p>
				<p>5. Round each number to the nearest 10, to estimate a single stage multiplication</p>
				<p>6. Round each number to the nearest 10, to estimate a single stage division</p>
